-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. Claim 10 is objected to because of the following informalities: Line 2 recites "interior permanent magnet motor", should it be "internal permanent magnet motor"?

Appropriate correction is required.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-19 is rejected under 35 U.S.C. 103(a) as being unpatentable over IEEE international symposium on industrial electronics, June 9-12, pp 1-6 as cited by applicant in view of Kirkpatrick.

IEEE symposium specifically page 3 discloses hybrid electric vehicle comprising, an inverter coupled to battery system and motor coupled to inverter, motor having first, second and third stator windings corresponding to first second and third phases of motor, wherein inverter comprises a first leg connect to a first selected on of the first and second lead of the first, second and third stator winding, second leg connected to a second selected one of the first and second leads of the first ,second and third stator winds, a third leg connected to a third selected one of the first and second leads of the first , second and third stator winds, fourth leg connected to a fourth selected one of the first and second leads of the first , second and third stator windings, a fifth leg connected to a fifth selected one of the first and second leads of the first, second and

third stator winds, and sixth leg connected to a sixth selected one of the first and second leads of the first, second and third stator windings, see page 3 fig 4 and col 1 description of fig 4 and col 2 paragraph 1-3. IEEE symposium lacks disclosing chargeable battery system. Kirkpatrick discloses chargeable battery system; see col 1 lines 15-30 and col 2 lines 30-50. It would have been obvious to one of ordinary skill in the art to combine the inverter with motor of IEEE symposium with chargeable battery system of Kirkpatrick to prevent a dead battery and vehicle will be functioning.
